

MATH 119: Quiz 2

Name: Reg

Directions:

- * Show your thought process (commonly said as "show your work") when solving each problem for full credit.
- * If you do not know how to solve a problem, try your best and/or explain in English what you would do.
- * Good luck!

1. Suppose $t = \frac{17\pi}{6}$

(a) Find the terminal point associated with t .

$$t = \frac{17\pi}{6} = \frac{12\pi + 5\pi}{6} = 2\pi + \frac{5\pi}{6} = 2\pi + \frac{\pi}{2} + \frac{\pi}{3}$$

① $\bar{t} = \frac{\pi}{6}$

② $Q\left(\frac{\sqrt{3}}{2}, \frac{1}{2}\right)$

③ $P\left(-\frac{\sqrt{3}}{2}, \frac{1}{2}\right)$

(b) Find $\sin(t)$, $\cos(t)$ and $\tan(t)$.

$t = \frac{17\pi}{6}$ has terminal point $P\left(-\frac{\sqrt{3}}{2}, \frac{1}{2}\right)$

so $\sin\left(\frac{17\pi}{6}\right) = \boxed{\frac{1}{2}}$

$\cos\left(\frac{17\pi}{6}\right) = \boxed{-\frac{\sqrt{3}}{2}}$

$\tan\left(\frac{17\pi}{6}\right) = \frac{\frac{1}{2}}{-\frac{\sqrt{3}}{2}} = -\frac{1}{\sqrt{3}} = -\frac{1}{\sqrt{3}} \cdot \frac{\sqrt{3}}{\sqrt{3}} = \boxed{-\frac{\sqrt{3}}{3}}$

2. I want to transform $f(x) = \sin(x)$ into $g(x)$ by applying the following transformations:

- (a) Reflection around x-and y-axes
- (b) Vertical shift of 3 units up
- (c) Horizontal shift four units right
- (d) Vertical stretch by a factor of 2
- (e) Horizontal stretch by a factor of 5

Based on $f(x)$, what should the formula of $g(x)$ be?

$$g(x) = 3 - 2 \sin\left(-\frac{1}{5}(x - 4)\right)$$

(Handwritten annotations: (b) points to 3, (a) points to -, (d) points to 2, (c) points to 4, (e) points to 1/5)

3. Graph one period of

$$f(x) = 3 \cos\left(x - \frac{\pi}{2}\right)$$

horizontal shift right $\frac{\pi}{2}$ units

vertical stretch by a factor of 3

Choose your tick marks!
