

MATH 118: Midterm 2

Name: Key

Directions:

- * Show your thought process (commonly said as "show your work") when solving each problem for full credit.
- * If you do not know how to solve a problem, try your best and/or explain in English what you would do.
- * Good luck!

1. Short answer questions:

(a) Given three functions

$$f(x) = \sqrt{x-2}, \quad g(x) = \frac{2x}{3x+1}, \quad h(x) = x^4$$

find the composition $g \circ f \circ h$.

$$(g \circ f \circ h)(x) = g(f(h(x))) = g(f(x^4)) = g(\sqrt{x^4-2}) = \frac{2\sqrt{x^4-2}}{3\sqrt{x^4-2}+1}$$

(b) Given a polynomial $f(x) = (x-1)(x-2)(x-3)(x-4)(x-5)$, should $f(4.5)$ be positive or negative and why?

$$\begin{aligned} f(4.5) &= (4.5-1) \cdot (4.5-2) \cdot (4.5-3) \cdot (4.5-4) \cdot (4.5-5) \\ &= - \cdot - \cdot - \cdot - \cdot + \\ &= \boxed{+} \end{aligned}$$

(c) Find a degree four polynomial with zeros $i\sqrt{3}$ and $5i$.

$$P(x) = (x - i\sqrt{3})(x + i\sqrt{3})(x - 5i)(x + 5i)$$

(d) Given a base function $f(x) = \sqrt{x}$ and two transformed functions

$$g(x) = \sqrt{x-2} \quad h(x) = \sqrt{\frac{1}{2}x-2}$$

do both $g(x)$ and $h(x)$ have the same horizontal shift from $f(x)$? If not, state both of the horizontal shifts of $g(x)$ and $h(x)$.

No. $h(x) = \sqrt{\frac{1}{2}(x-4)}$

$g(x)$ is shifted 2 units to the right from $f(x)$

$h(x)$ is shifted 4 units to the right from $f(x)$

2. Suppose $f(x) = x^2 - x$.

(a) What is the domain of $f(x)$?

$$\mathbb{R} \quad \text{or} \quad (-\infty, \infty)$$

(b) Find a complete factorization of $f(x)$.

$$f(x) = x^2 - x = \boxed{x \cdot (x - 1)}$$

(c) Calculate and **fully expand + simplify** the expression $\frac{f(x+h) - f(x)}{h}$.

$$\begin{aligned} \frac{f(x+h) - f(x)}{h} &= \frac{(x+h)^2 - (x+h) - (x^2 - x)}{h} \\ &\stackrel{\substack{\text{expand} \\ \text{dist law}}}{=} \frac{\cancel{x^2} + 2xh + h^2 - \cancel{x} - h - \cancel{x^2} + \cancel{x}}{h} \\ &= \frac{2xh + h^2 - h}{h} \\ &\stackrel{\text{GCF}}{=} \frac{\cancel{h} \cdot (2x + h - 1)}{\cancel{h}} \\ &\stackrel{\text{fact \#5}}{=} \boxed{2x + h - 1} \end{aligned}$$

3. Given the polynomial $P(x) = x^4 + 4x^3 + 5x^2 + 4x + 4$:

(a) What is the average rate of change of $P(x)$ on $[0, 1]$?

$$\frac{P(1) - P(0)}{1 - 0} = \frac{1 + 4 + 5 + 4 + 4 - (0 + 0 + 0 + 0 + 4)}{1} = \frac{18 - 4}{1} = \boxed{14}$$

(b) Is $P(x)$ even, odd, or neither? Full credit requires using the definition of even/odd.

$$\begin{aligned} P(-x) &= (-x)^4 + 4(-x)^3 + 5(-x)^2 + 4(-x) + 4 \\ &= x^4 - 4x^3 + 5x^2 - 4x + 4 \end{aligned}$$

only two terms flipped sign

no way for $P(-x)$ to equal $P(x)$ or $-P(x)$. neither

(c) $x = -2$ is a zero of multiplicity two for $P(x)$. Use this information to find a complete factorization of $P(x)$.

$x = -2$ is multiplicity 2 means $(x - (-2))^2 = (x + 2)^2$ is a factor
expanding $(x + 2)^2$ gives $x^2 + 4x + 4$. Long divide:

$$\begin{array}{r} x^2 + 1 \\ x^2 + 4x + 4 \overline{) x^4 + 4x^3 + 5x^2 + 4x + 4} \\ \underline{-(x^4 + 4x^3 + 4x^2)} \\ 0 + 0 + x^2 + 4x + 4 \\ \underline{-(x^2 + 4x + 4)} \\ 0 \end{array}$$

0
RHS

By division algorithm $x^4 + 4x^3 + 5x^2 + 4x + 4 = \underbrace{(x^2 + 4x + 4)}_{D(x)} \underbrace{(x^2 + 1)}_{Q(x)} + \underbrace{0}_{R(x)}$

$$= (x + 2)^2 (x^2 + 1)$$

Factor $x^2 + 1$ using quadratic formula: $a = 1, b = 0, c = 1$

$$x = \frac{-0 \pm \sqrt{0^2 - 4 \cdot 1 \cdot 1}}{2 \cdot 1} = \frac{\pm \sqrt{-4}}{2} = \frac{\pm i \sqrt{4}}{2} = \frac{\pm 2i}{2} = \pm i$$

free #5

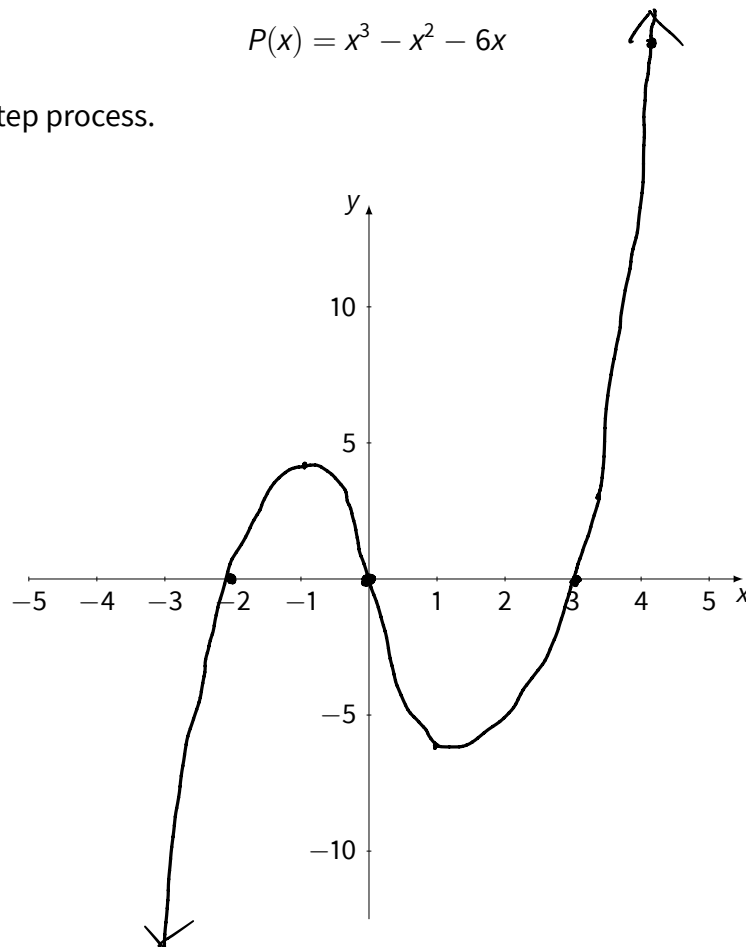

so i and $-i$ are zeros of $x^2 + 1$, meaning $(x - i)(x - (-i)) = (x - i)(x + i) = x^2 + 1$

\therefore , a complete factorization is $\boxed{(x + 2)^2 (x - i) (x + i)}$

4. Sketch an accurate graph of the polynomial

$$P(x) = x^3 - x^2 - 6x$$

using the four step process.

① zeros: factor $P(x) = x^3 - x^2 - 6x$

$$P(x) = x^3 - x^2 - 6x$$

$$= x(x^2 - x - 6)$$

new x
1 -3
1 2

$$= x(x-3)(x+2)$$

zeros are $x=0, 3, -2$

$$P(-3) = (-3) \cdot (-3-3) \cdot (-3+2) = (-3)(-6)(-1) = -18$$

$$P(-1) = (-1)(-1-3)(-1+2) = (-1)(-4)(1) = 4$$

$$P(1) = 1 \cdot (1-3)(1+2) = 1 \cdot (-2) \cdot 3 = -6$$

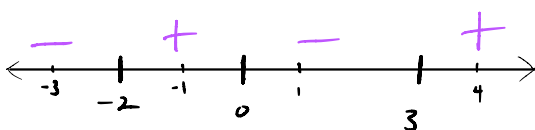

$$P(4) = 4 \cdot (4-3) \cdot (4+2) = 4 \cdot 1 \cdot 6 = 24$$

③ End behavior: leading term x^3

$$y \rightarrow \infty \text{ as } x \rightarrow \infty$$

$$y \rightarrow -\infty \text{ as } x \rightarrow -\infty$$

④ graph

x	-3	-2	-1	0	1	3	4
P(x)	-18	0	4	0	-6	0	24

5. Given the function

$$f(x) = 4 - x^2, \quad x \geq 0$$

(a) Calculate the inverse f^{-1} algebraically.

① I-I from picture on right

② $y = 4 - x^2, \quad y \leq 4$

③ $x^2 = 4 - y, \quad y \leq 4$

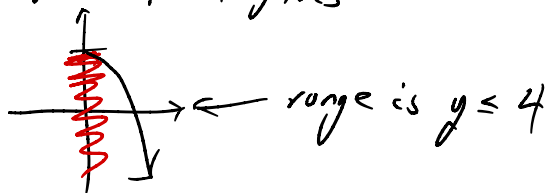

$$x = \pm \sqrt{4 - y}, \quad y \leq 4$$

choose $x = +\sqrt{4 - y}$ since $x \geq 0$ and square root outputs positive numbers.

$$x = \sqrt{4 - y}, \quad y \leq 4$$

④ $f^{-1}(x) = y = \sqrt{4 - x}, \quad x \leq 4$

x^2 reflected around x-axis,
shifted up 4 gives

(b) Use the Inverse Function Property to verify your result of f^{-1} is actually the inverse of $f(x)$.

$$\begin{aligned} (f \circ f^{-1})(x) &= f(f^{-1}(x)) \\ &= f(\sqrt{4 - x}) \\ &= 4 - (\sqrt{4 - x})^2 \\ &= 4 - (4 - x) \\ &= 4 - 4 + x \\ &= x \quad \checkmark \end{aligned}$$

6. Given

$$F(x) = \sqrt{x-1} \quad G(x) = -(x^2 - 1)$$

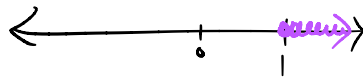

(a) Find the domain of $F(x)$.

$$F(x) = \sqrt{x-1}$$

what's left

problems: $x-1 < 0$

(remove from \mathbb{R}) $x < 1$

$$[1, \infty)$$

(b) Decompose $F(x)$ into two functions f and g where $f \circ g = F$. You are not allowed to choose $f(x) = x$ or $g(x) = x$.

$$f(x) = \sqrt{x}, \quad g(x) = x-1 \quad \text{why:}$$

$$(f \circ g)(x) = f(g(x)) = f(x-1) = \sqrt{x-1} = F(x) \quad \checkmark$$

(c) Calculate $(F \circ G)(0)$.

$$\begin{aligned} (F \circ G)(0) &= F(G(0)) \\ &= F(-(0^2 - 1)) \\ &= F(-(-1)) \\ &= F(1) \\ &= \sqrt{1-1} \\ &= \sqrt{0} \\ &= 0 \end{aligned}$$

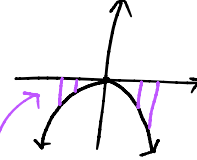

(d) Find the function $F \circ G$ and explain why the domain of this function is the single number $x = 0$.

$$\begin{aligned} (F \circ G)(x) &= F(G(x)) \\ &= F(-(x^2 - 1)) \\ &= F(-x^2 + 1) \\ &= \sqrt{-x^2 + 1 - 1} \\ &= \sqrt{-x^2} \end{aligned}$$

$$\text{so } F \circ G = \sqrt{-x^2}$$

problems
(remove from \mathbb{R})

$$-x^2 < 0$$

use graph of $-x^2$ and check when $-x^2 < 0$

every height of $-x^2$ is less than 0 except at 0. so we remove all real #'s except for 0 itself.
